

Guiding Questions for Ontology-Guided Climate-Health Policy Gap Analysis

No	Guiding question	Main analytical purpose
1	Which climate-sensitive health risks are most frequently reported in Bangladeshi news coverage?	Identify media-visible health risks
2	Which climate hazards are linked to these health risks in the news, such as heat, flood, cyclone, salinity, air pollution or drought?	Connect hazard to health risk
3	Which vulnerable groups are mentioned in the news as affected by climate-health risks?	Identify equity concern
4	Which geographic areas are repeatedly associated with climate-health risks in the news?	Identify spatial coverage concern
5	How urgent, severe or repeated is the media concern for each climate-health risk?	Assign media concern score
6	Do existing Bangladesh policy documents recognize the same climate-health risks reported in the news?	Check news-policy coherence
7	Do policy documents address the same vulnerable groups identified in news coverage?	Detect coverage/equity alignment
8	Do policy documents address the same geographic areas or risk-prone zones highlighted in news coverage?	Detect geographic coherence/gap
9	Do policy documents provide clear policy measures for the reported risks, or only general recognition?	Measure policy strength
10	Do policy measures identify responsible institutions, coordination mechanisms and accountability structures?	Check governance alignment, WHO C1
11	Do policy measures include training or capacity-building for health workers on climate-sensitive health risks?	Check workforce alignment, WHO C2
12	Do policies include vulnerability assessment, risk mapping or identification of exposed groups and locations?	Check assessment alignment, WHO C3
13	Do policies integrate climate data, disease surveillance, early warning systems and real-time monitoring?	Check surveillance alignment, WHO C4

14	Do policies include research, evidence generation, data linkage or knowledge translation for climate-health risks?	Check research alignment, WHO C5
15	Do policies address climate-resilient and low-carbon health facilities, WASH, energy, supply chains or infrastructure?	Check infrastructure alignment, WHO C6
16	Do policies address environmental determinants of health such as WASH, air quality, food security, housing, workplace exposure or ecosystem risks?	Check determinant alignment, WHO C7
17	Are disease programmes, such as dengue, diarrhoea, heat-health, respiratory disease, nutrition or mental health, made climate-informed?	Check programme alignment, WHO C8
18	Do policies include preparedness, contingency planning and emergency response for floods, cyclones, heatwaves or outbreaks?	Check emergency alignment, WHO C9
19	Do policies include budget, climate finance, domestic funding, donor support or resource mobilization for climate-health action?	Check financing alignment, WHO C10
20	How do Bangladesh policy measures align with international climate-health frameworks such as WHO operational framework, WHO Global Action Plan, Belém Health Action Plan and WHO/UN Compendium?	Check international alignment
21	Where do news concerns and policy responses match clearly?	Identify coherence
22	Where do news concerns appear stronger than policy responses?	Detect policy gap
23	What type of gap exists: design gap, implementation gap, coverage gap, outcome gap or equity gap?	Classify gap type
24	Does recent external memory evidence from WHO, UN, government updates or new statistics confirm, update or contradict the finding?	Recheck with recent evidence
25	What is the final traceable conclusion after news evidence, policy evidence, international framework alignment and external memory recheck?	Produce final result
